includes all your app's compiled code and resources, and defers APK generation and signing to Google Play.

*About Android*

*App Bundles |*

*Android*

*Developers*

In Android, you

# Read Book

## Android

usually create a Dagger graph that lives in your application class because you want an instance of the graph to be in memory as long as the app is running. In this way, the graph is attached to the app

# Read Book

## Android

lifecycle. In some cases, you might also want to have the application context available in the graph.

*Using Dagger in
