EARTHQUAKES: Epicenter

Determination, Seismic Waves, and Hazards Introduction Earthquakes are vibrations of Earth caused by large releases of energy that accompany volcanic eruptions, explosions, and movements of Earth's crust along fault lines. The earthquake vibrations are waves of energy that radiate through Earth away from the focus.

Earthquake Introduction:

Seismographs are used to detect and record earthquake waves – both P-waves and S-waves. Because P-waves and S-waves travel at different speeds, they reach the seismic stations at different times. The

Can humans create earthquakes?
Maybe not intentionally, but the
answer is yes and here is why. If a
water reservoir is built on top of an
active fault line, the water may actually
lubricate the fault and weaken the
stress built up within it. This may either
create a series of small earthquakes or
potentially create a large earthquake.

Earth Science Laboratory How Can You Locate The Epicenter of an Earthquake? Three Types of Waves
Major earthquakes occur when there is rock movement along a fault (crack in the crust). The sudden slippage of huge rock masses sets up shock waves that travel through the earth.
