~~Inner Vs Outer Planet Answer Key~~

The outer planets are planets in our Solar System that are farther away from the sun. These are Jupiter, Saturn, Uranus, and Neptune. These are the light gases and ice that were swept to the outer part of the protoplanetary disk which formed into the outer planets. Thus, outer planets are mainly composed of gases such as helium and hydrogen.

~~Inner vs Outer Planets Difference~~

All planets in our solar system rotate and they all revolve around the Sun. Inner planets: Mercury, Venus, Earth. Outer planets: Jupiter, Saturn, Uranus, Neptune. Comets are made of ice and rock.
